/Michael Kornakov/ Supervisory Patent Examiner, Art Unit 1792	Examiner, /S.K./					

Continuation of 11. does NOT place the application in condition for allowance because: Applicants argue that a person of ordinary skill in the art would see no advantage to employ a mechnism for bending the electrode in the apparatus of either Redhead et al/ CA-910. Examiner's position is that since the claims recite cleaning electrode (i.e. claims 23-31), one skilled in the art would have found obvious to modify the apparatus of either Redhead et al/CA-910 by adding a mechanism for bending the electrode as mentioned in Middlin et al such that the cleaning apparatus of combined teaching of either Redhead et al/CA-910 and Middlin et al can clean different kind of electrodes successfully, hence enhance the cleaning efficiency for cleaning different electrodes. Applicants argue that prior art does not show that there has been any recognition in the art of a need to provide a single cleaning apparatus to perform two distinct tasks. Examiner position is that since all claimed elements were known in the prior art, one skilled in the art could have combined the elements as claimed with no changes in their respective functions, and the combination would have yielded predictable result to one or ordinary skill in the art at the time of the invention. (MPEP 2143). Applicants argue that a person in the art would see no advantage to bend the electrode in the method of either Redhead et al/CA-910. Examiner position is that since currently presented claim recites a metal deposit (which could be hard/lossen), and the combined prior arts teach the steps as claimed, one skilled in the art would found it obvious to remove metal deposit (which could be hard/lossen) on a cathode with reasonable expectation of success.
